Preface

Vladimir Igorevich Arnold is one of the most influential mathematicians of our time. V.I. Arnold launched several mathematical domains (such as modern geometric mechanics, symplectic topology, and topological fluid dynamics) and contributed, in a fundamental way, to the foundations and methods in many subjects, from ordinary differential equations and celestial mechanics to singularity theory and real algebraic geometry. Even a quick look at a partial list of notions named after Arnold already gives an overview of the variety of such theories and domains:

KAM (Kolmogorov–Arnold–Moser) theory,
The Arnold conjectures in symplectic topology,
The Hilbert–Arnold problem for the number of zeros of abelian integrals,
Arnold’s inequality, comparison, and complexification method in real algebraic geometry,
Arnold–Kolmogorov solution of Hilbert’s 13th problem,
Arnold’s spectral sequence in singularity theory,
Arnold diffusion,
The Euler–Poincaré–Arnold equations for geodesics on Lie groups,
Arnold’s stability criterion in hydrodynamics,
ABC (Arnold–Beltrami–Childress) flows in fluid dynamics,
The Arnold–Korkina dynamo,
Arnold’s cat map,
The Arnold–Liouville theorem in integrable systems,
Arnold’s continued fractions,
Arnold’s interpretation of the Maslov index,
Arnold’s relation in cohomology of braid groups,
Arnold tongues in bifurcation theory,
The Jordan–Arnold normal forms for families of matrices,
The Arnold invariants of plane curves.

Arnold wrote some 700 papers, and many books, including 10 university textbooks. He is known for his lucid writing style, which combines mathematical rigour with physical and geometric intuition. Arnold’s books on *Ordinary differential equations* and *Mathematical methods of classical mechanics* became mathematical bestsellers and integral parts of the mathematical education of students throughout the world.

Some Comments on V.I. Arnold's Biography and Distinctions

V.I. Arnold was born on June 12, 1937 in Odessa, USSR. In 1954–1959 he was a student at the Department of Mechanics and Mathematics, Moscow State University. His M.Sc. Diploma work was entitled “On mappings of a circle to itself.” The degree of a “candidate of physical-mathematical sciences” was conferred to him in 1961 by the Keldysh Applied Mathematics Institute, Moscow, and his thesis advisor was A.N. Kolmogorov. The thesis described the representation of continuous functions of three variables as superpositions of continuous functions of two variables, thus completing the solution of Hilbert's 13th problem. Arnold obtained this result back in 1957, being a third year undergraduate student. By then A.N. Kolmogorov showed that continuous functions of more variables can be represented as superpositions of continuous functions of three variables. The degree of a “doctor of physical-mathematical sciences” was awarded to him in 1963 by the same Institute for Arnold's thesis on the stability of Hamiltonian systems, which became a part of what is now known as KAM theory.

After graduating from Moscow State University in 1959, Arnold worked there until 1986 and then at the Steklov Mathematical Institute and the University of Paris IX.

Arnold became a member of the USSR Academy of Sciences in 1986. He is an Honorary member of the London Mathematical Society (1976), a member of the French Academy of Science (1983), the National Academy of Sciences, USA (1984), the American Academy of Arts and Sciences, USA (1987), the Royal Society of London (1988), Academia Lincei Roma (1988), the American Philosophical Society (1989), the Russian Academy of Natural Sciences (1991). Arnold served as a vice-president of the International Union of Mathematicians in 1999–2003.

Arnold has been a recipient of many awards among which are the Lenin Prize (1965, with Andrey Kolmogorov), the Crafoord Prize (1982, with Louis Nirenberg), the Lobachevsky Prize of Russian Academy of Sciences (1992), the Harvey prize (1994), the Dannie Heineman Prize for Mathematical Physics (2001), the Wolf Prize in Mathematics (2001), the State Prize of the Russian Federation (2007), and the Shaw Prize in mathematical sciences (2008).

One of the most unusual distinctions is that there is a small planet Vladarnolda, discovered in 1981 and registered under #10031, named after Vladimir Arnold. As of 2006 Arnold was reported to have the highest citation index among Russian scientists.

In one of his interviews V.I. Arnold said: “The evolution of mathematics resembles the fast revolution of a wheel, so that drops of water fly off in all directions. Current fashion resembles the streams that leave the main trajectory in tangential directions. These streams of works of imitation are the most noticeable since they constitute the main part of the total volume, but they die out soon after departing the wheel. To stay on the wheel, one must apply effort in the direction perpendicular to the main flow.”

With this volume Springer starts an ongoing project of putting together Arnold's work since his very first papers (not including Arnold's books.) Arnold continues to do research and write mathematics at an enviable pace. From an originally planned 8 volume edition of his Collected Works, we already have to increase this estimate to 10 volumes, and there may be more. The papers are organized chronologically. One might regard this as an attempt to trace to some extent the evolution of the interests of V.I. Arnold and cross-fertilization of his ideas. They are presented using the original English translations, when-

ever such were available. Although Arnold's works are very diverse in terms of subjects, we group each volume around particular topics, mainly occupying Arnold's attention during the corresponding period.

Volume I covers the years 1957 to 1965 and is devoted mostly to the representations of functions, celestial mechanics, and to what is today known as the KAM theory.

Acknowledgements. The Editors thank the Göttingen State and University Library and the Caltech library for providing the article originals for this edition. They also thank the Springer office in Heidelberg for its multilateral help and making this huge project of the Collected Works a reality.

Contents

1	On the representation of functions of two variables in the form $\chi[\phi(x)+\psi(y)]$ <i>Uspekhi Mat. Nauk</i> 12, No. 2, 119–121 (1957); translated by Gerald Gould	1
2	On functions of three variables <i>Amer. Math. Soc. Transl. (2)</i> 28 (1963), 51–54. Translation of <i>Dokl. Akad. Nauk SSSR</i> 114:4 (1957), 679–681	5
3	The mathematics workshop for schools at Moscow State University <i>Mat. Prosveshchenie</i> 2, 241–245 (1957); translated by Gerald Gould	9
4	The school mathematics circle at Moscow State University: harmonic functions (in Russian) <i>Mat. Prosveshchenie</i> 3 (1958), 241–250	15
5	On the representation of functions of several variables as a superposition of functions of a smaller number of variables <i>Mat. Prosveshchenie</i> 3, 41–61 (1958); translated by Gerald Gould	25
6	Representation of continuous functions of three variables by the superposition of continuous functions of two variables <i>Amer. Math. Soc. Transl. (2)</i> 28 (1963), 61–147. Translation of <i>Mat. Sb. (n.S.)</i> 48 (90):1 (1959), 3–74 Corrections in <i>Mat. Sb. (n.S.)</i> 56 (98):3 (1962), 392	47
7	Some questions of approximation and representation of functions <i>Amer. Math. Soc. Transl. (2)</i> 53 (1966), 192–201. Translation of <i>Proc. Internat. Congress Math. (Edinburgh, 1958)</i> , Cambridge Univ. Press, New York, 1960, pp. 339–348	134
8	Kolmogorov seminar on selected questions of analysis <i>Uspekhi Mat. Nauk</i> 15, No. 1, 247–250 (1960); translated by Gerald Gould	144
9	On analytic maps of the circle onto itself <i>Uspekhi Mat. Nauk</i> 15, No. 2, 212–214 (1960) (Summary of reports announced to the Moscow Math. Soc.); translated by Gerald Gould	149
10	Small denominators. I. Mapping of the circumference onto itself <i>Amer. Math. Soc. Transl. (2)</i> 46 (1965), 213–284. Translation of <i>Izv. Akad. Nauk SSSR Ser. Mat.</i> 25:1 (1961). Corrections in <i>Izv. Akad. Nauk SSSR Ser. Mat.</i> 28:2 (1964), 479–480	152

11	The stability of the equilibrium position of a Hamiltonian system of ordinary differential equations in the general elliptic case <i>Soviet. Math. Dokl. 2 (1961). Translation of Dokl. Akad. Nauk SSSR 137:2 (1961), 255–257</i>	224
12	Generation of almost periodic motion from a family of periodic motions <i>Soviet. Math. Dokl. 2 (1961). Translation of Dokl. Akad. Nauk SSSR 138:1 (1961) 13–15</i>	227
13	Some remarks on flows of line elements and frames <i>Soviet. Math. Dokl. 2 (1961). Translation of Dokl. Akad. Nauk SSSR 138:2 (1961), 255–257</i>	230
14	A test for nomographic representability using Descartes' rectilinear abacus (in Russian) <i>Uspekhi Mat. Nauk 16:4 (1961)</i>	233
15	Remarks on winding numbers (in Russian) <i>Sibirsk. Mat. Ž. 2:6 (1961), 807–813</i>	236
16	On the behavior of an adiabatic invariant under slow periodic variation of the Hamiltonian <i>Soviet. Math. Dokl. 3 (1962). Translation of Dokl. Akad. Nauk SSSR 142:4 (1962), 758–761</i>	243
17	Small perturbations of the automorphisms of the torus <i>Soviet. Math. Dokl. 3 (1962). Translation of Dokl. Akad. Nauk SSSR 144:2 (1962), 695–698, Corrections in Dokl. Akad. Nauk SSSR, 1963, 150:5, 958</i>	248
18	The classical theory of perturbations and the problem of stability of planetary systems <i>Soviet. Math. Dokl. 3 (1962). Translation of Dokl. Akad. Nauk SSSR 145:3 (1962), 487–490</i>	253
19	Letter to the editor (in Russian) <i>Mat. Sb. (n.S.) 56 (98):3 (1962), 392</i>	258
20	Dynamical systems and group representations at the Stockholm Mathematics Congress (in Russian) <i>Uspekhi Mat. Nauk 18:2 (1963)</i>	259
21	Proof of a theorem of A. N. Kolmogorov on the invariance of quasi-periodic motions under small perturbations of the Hamiltonian <i>Russian Math. Surveys 18 (1963). Translation of Uspekhi Mat. Nauk 18:5 (1963), 13–40</i>	267
22	Small denominators and stability problems in classical and celestial mechanics (in Russian) <i>Problems of the motion of artificial satellites. Reports at the conference on general applied topics in theoretical astronomy (Moscow, 20–25 November 1961), USSR Academy of Sciences Publishing House, Moscow, 1963, pp. 7–17</i>	295

23	Small denominators and problems of stability of motion in classical and celestial mechanics <i>Russian Math. Surveys</i> 18 (1963). Translation of <i>Uspekhi Mat. Nauk</i> 18:6 (1963), 91–192, Corrections in <i>Uspekhi Mat. Nauk</i> 22:5 (1968), 216.....	306
24	Uniform distribution of points on a sphere and some ergodic properties of solutions of linear ordinary differential equations in a complex region <i>Soviet Math. Dokl.</i> 4 (1963). Translation of <i>Dokl. Akad. Nauk SSSR</i> 148:1 (1963), 9–12	413
25	On a theorem of Liouville concerning integrable problems of dynamics <i>Amer. Math. Soc. Transl. (2)</i> 61(1967) 292–296. Translation of <i>Sibirsk. Mat. Ž.</i> 4:2 (1963).....	418
26	Instability of dynamical systems with several degrees of freedom <i>Soviet Math. Dokl.</i> 5 (1964). Translation of <i>Dokl. Akad. Nauk SSSR</i> 156:1 (1964), 9–12	423
27	On the instability of dynamical systems with several degrees of freedom (in Russian) <i>Uspekhi Mat. Nauk</i> 19:5 (1964), 181	428
28	Errata to V.I. Arnol'd's paper: "Small denominators. I." <i>Izv. Akad. Nauk SSSR Ser. Mat.</i> 28, 479–480 (1964); translated by Gerald Gould	433
29	Small denominators and the problem of stability in classical and celestial mechanics (in Russian) <i>Proceedings of the Fourth All-Union Mathematics Congress (Leningrad, 3–12 July 1961), vol. 2, Nauka, Leningrad, 1964, pp.</i> 403–409.....	435
30	Stability and instability in classical mechanics (in Russian) <i>Second Math. Summer School, Part II (Russian), Naukova Dumka, Kiev, 1965, pp.</i> 85–119	442
31	Conditions for the applicability, and estimate of the error, of an averaging method for systems which pass through states of resonance in the course of their evolution <i>Soviet Math. Dokl.</i> 6 (1965). Translation of <i>Dokl. Akad. Nauk SSSR</i> 161:1 (1965), 9–12	477
32	On a topological property of globally canonical maps in classical mechanics <i>Translation of Sur une propriété topologique des applications globalement canoniques de la mécanique classique. C. R. Acad. Sci. Paris</i> 261:19 (1965) 3719–3722; translated by Alain Chenciner and Jaques Fejoz.....	481
